

FPI 5000 Inserting System

The FPI 5000 Inserting System Sets the Standard for Adaptability, Productivity, and Ease of Operation.

The FPI 5000 is the innovative answer to complex mailroom demands. It combines ingenious folding technology, optimal processing security, and a large loading capacity to help you process single or multiple page mailings, invoices, and personalized letters quickly, reliably, and affordably. The powerful, yet quiet, folding mechanism has the capacity to fold up to eight documents of varied sizes with maximum efficiency.

Anyone can operate the FPI 5000 since no programming is necessary to insert loaded documents into envelopes. **W**hen changing a job, all folding settings are automatically adjusted to perform the necessary steps, which saves additional time and training. The modular design of the FPI 5000 saves you money because it gives you the flexibility to meet your current needs, while accommodating expanded capabilities as you grow.

FPi 5000 Inserting System

Key Advantages

Feed Stations Handle a variety of documents or envelope-sized supplements (postcards, reply envelopes, flyers, prefolded documents etc.). Miscellaneous daily mail can be manually fed from the top station.

Special Stations A manual separation setting makes it easy to process documents and brochures made of heavy or treated paper.

Customer-Specific Solutions Position and quantity of both types of stations can be configured according to each customer's specific mail-processing needs.

Central Control Panel All functions are controlled from a central, easy-to-use interactive panel featuring a graphic display and six function keys.

Optical Marks Reading (OMR) Optional OMR line-code recognition makes it possible to assemble personalized mailings (like invoices), to select the optimal combination of supplements for filling envelopes to the maximum allowable weight, or to divert extra copies away from the envelope.

Folding Shell Construction The sensible clamshell design offers quick access to material transport passages, making it possible to retrieve stalled materials quickly and intact.

Envelope Collector The FPi 5000 is equipped with a standard stacker for finished envelopes. Two alternative envelope stacker options make it possible to increase the collecting capacity of finished envelopes, or to transfer finished envelopes to a downstream postage meter.

Specifications

Documents	Min	Max
Width	5.07" x 8.97"	
Height	3.51" x 13.884"	
Paper weight	16 lbs. to 67 lbs.	
Prefolded inserts	Up to .078" total thickness	
Load capacity	325 sheets per station	
Folding performance	Up to 8 sheets	
Inserting performance	Up to 25 unfolded sheets	
Inserting speed	Up to 3,500 letters per hour	
Fold types	Half fold, Z fold, letter fold, double parallel	
Programmable job memory	Up to 9 jobs, plus Fill & Start	
Envelopes	With or without windows #10, #9 and 6 x 9	
Max. machine dimensions (with standard envelope stacker)	62" x 16.38" x 35.88" (W/D/H)	
Max. weight (FPi 5060)	228 lbs.	
Power	220/240V, 50Hz, 115V, 60Hz	

Specifications subject to change.

Special Features

- ✓ Fill & Start comfort function for simplest operation
- ✓ 8-sheet folding capacity
- ✓ System can be upgraded (from 2 feed stations up to 4 or 6 stations)
- ✓ Inserts most common formats, including postcards, special types of paper, and stapled materials in a single work step
- ✓ No need to presort different types of documents
- ✓ Short transport paths reduce risk of handling errors
- ✓ Efficient multi-sheet function to feed multiple pages from all stations
- ✓ Automatic diversion of unwanted double documents
- ✓ Memory to program up to 9 different jobs, plus fill & start function that opens limitless possibilities
- ✓ Piece counters for individual jobs and machine total
- ✓ Quiet folding mechanism
- ✓ Optional OMR feeder control from all stations
- ✓ Choose from up to 6 automatic feeding stations
